PROFESSIONAL SUMMARY

Informatics Engineering student (expected graduation October 2026) with a BNSP Data Analyst certification and hands-on experience in data preparation, full-stack web development, and multi-agent AI system design. Proven ability to own technical deliverables end-to-end from raw data structuring to deployment while collaborating in cross-functional teams.

EDUCATION

Universitas Esa Unggul

Jun 2022 – Present

Bachelor of Informatics Engineering (S.Kom.) Expected Graduation: October 2026 | GPA: [3.85 / 4.00]

- Completed Data Analysis Bootcamp (Python, EDA, visualization) and Dicoding Machine Learning Training (supervised/unsupervised learning, neural networks)

CERTIFICATIONS

BNSP Certified Data Analyst · Badan Nasional Sertifikasi Profesi (BNSP)

2025

National competency certification covering data collection, processing, analysis, visualization, and insight communication

WORK EXPERIENCE

IT Intern · Lembaga Management FEB UI, Jakarta

Sep 2025 – Present

- Gathered, audited, and cleaned fragmented organizational data from multiple sources before architecting SIMASTER an Asset Management System that digitalized inventory tracking across departments, ensuring data accuracy from pipeline through to live monitoring
- Independently scoped and delivered an AI Proposal Generator (multi-agent LLM framework) as undergraduate thesis automating requirement analysis, cost estimation, and document generation end-to-end

Web Developer Intern · PT. Malaka Teknologi Indonesia

Mar – Aug 2025

- Led front-end implementation within a cross-functional team converting Figma mockups into pixel-accurate responsive pages (HTML, CSS) while coordinating with the design team member to align technical output with visual intent
- Maintained and extended multiple WordPress/Elementor client sites alongside teammates, contributing to server maintenance, deployment scheduling, and production troubleshooting

PROJECTS

Boarding House Management System · Full-Stack Developer (Team)

2025

Team of 4; responsible for full-stack development and back-end architecture while coordinating feature requirements with teammates on UI/UX design and documentation.

- Architected full-stack web app (PHP, MySQL, JS) within a team designed back-end logic, RBAC system (Admin/Employee/Owner), and directed teammates on API contracts and data structure to ensure seamless front-end integration
- Built admin dashboard with real-time occupancy and revenue reporting views, translating team requirements into functional data displays

Psychology Assessment Web App · Full-Stack Developer (Team)

2025

Team project with dedicated UI/UX and documentation members; personally responsible for all full-stack development and data processing logic.

- Developed complete assessment platform (Flask/Python, SQL) with automated score calculation and dynamic result categorization across multiple test modules, collaborating with UI/UX teammate to translate wireframes into responsive pages
- Structured an extensible database schema enabling teammates and future contributors to add new test modules without back-end rework

TECHNICAL SKILLS

Data & Analytics: Python (Pandas, NumPy, Scikit-learn), SQL, Excel, Tableau, Power BI

Programming & Web: PHP, JavaScript, HTML, CSS, Flask, WordPress, Elementor, MySQL, Bootstrap

AI / ML: Multi-agent LLM frameworks, Scikit-learn, TensorFlow (Dicoding training)

Tools: Git, VS Code, Google Colab, Figma, Microsoft Office
